

AI/ML Engineer — PyTorch & MLOps

We are seeking an experienced **AI/ML Engineer** to help scale our core product and production AI capabilities. You will work with Python, PyTorch, cloud infrastructure, and modern ML systems to build, deploy, and optimize solutions that solve challenging real-world problems.

Strong professional communication skills in English are essential for this role. Candidates should be able to clearly explain complex technical concepts, participate confidently in architecture and engineering discussions, and collaborate effectively with U.S.-based and international stakeholders.

What You Will Do

- Build and train deep learning models for production systems.
- Design pipelines to clean and process large datasets.
- Work with software teams to deploy models into cloud services.
- Monitor model performance and fix errors quickly.
- Optimize model performance and speed.
- Work with product and data teams.

What You Need to Have

- Experience: Three or more years building machine learning models for real users.
- Coding Skills: Strong skill in Python, C++, or Java.
- Frameworks: Hands-on work with PyTorch, TensorFlow, or Scikit-learn.
- Tools: Experience with Docker, Kubernetes, and AWS or GCP cloud platforms.
- Knowledge of SQL, MLOps, API design and data pipelines.
